The Ultimate US Personal Finance & Budget Dashboard

Full product package: sheet structure and formulas, buyer guide, and sales copy.

Part 1 – Google Sheets Structure & Formulas

Build notes (read first)

- Name the file **Ultimate US Finance Dashboard**. Use USD formatting everywhere (Format > Number > Currency).
- Tabs, in order: **Start Here, Dashboard, Settings, Transactions, Budget, Debt Payoff, Savings Goals, Net Worth**.
- Colors: header navy `#1F3A5F`, input cells light yellow `#FFF8DC`, formula cells white and protected (Data > Protect sheets and ranges), so buyers don't break formulas.
- Every formula below assumes the exact layout shown. If you shift cells, adjust references.

Tab 1: Settings (lists that power the dropdowns)

Range	Content
B2	Currency symbol label: `$`
B3	Budget year (e.g. 2027)
D2:D8	Income categories: Paycheck, Freelance/1099, Side Hustle, Interest, Refunds, Gifts, Other
F2:F28	Expense categories (below)
H2:H8	Accounts: Checking, Savings, Credit Card 1, Credit Card 2, Cash, Venmo/PayPal, Other
J2:J13	Months: Jan to Dec

Expense categories (F2:F28), US-tailored:

- **Housing:** Rent/Mortgage, Renters/Home Insurance, HOA/Property Tax
- **Utilities:** Electric, Gas/Heating, Water/Trash, Internet, Phone
- **Food:** Groceries, Dining Out/Coffee
- **Transportation:** Gas/Fuel, Car Payment, Auto Insurance, Parking/Tolls/Transit

- **Debt:** Student Loans, Credit Card Payments, Personal Loans
- **Health:** Health Insurance, Medical/Pharmacy
- **Lifestyle:** Subscriptions (Netflix/Spotify/etc.), Shopping, Entertainment, Gym
- **Other:** Savings Transfer, Taxes (Freelancer Set-Aside), Miscellaneous

Name these ranges (Data > Named ranges): `IncomeCats` = Settings!D2:D8, `ExpenseCats` = Settings!F2:F28, `Accounts` = Settings!H2:H8, `BudgetYear` = Settings!B3.

Tab 2: Transactions (the only tab buyers type into daily)

Headers in row 1, data from row 2:

Col	Header	Notes
A	Date	Date validation
B	Description	Free text
C	Type	Dropdown: Income, Expense
D	Category	Dropdown: `IncomeCats` or `ExpenseCats`
E	Account	Dropdown: `Accounts`
F	Amount	Always positive, USD
G	Month	Formula (auto)
H	Year	Formula (auto)

G2 (month number):

```
=ARRAYFORMULA(IF(A2:A="","",MONTH(A2:A)))
```

H2 (year):

```
=ARRAYFORMULA(IF(A2:A="","",YEAR(A2:A)))
```

Dependent dropdown for Category (D): Data > Data validation > Custom formula is not enough for dependent lists, so use this simple approach: set D2:D to "Dropdown (from a range)" = `Settings!D2:F28` (both lists side by side). It is beginner friendly and works on mobile.

Tab 3: Budget (Monthly Budget Planner)

Top selector: B1 = month name dropdown (Settings!J2:J13), B2 = formula for month number:

```
=MATCH(B1,Settings!J2:J13,0)
```

Income block (rows 5 to 11):

Col	Header	Formula (row 5 example)
A	Income Source	`=Settings!D2`
B	Planned	Input (yellow)
C	Actual	`=SUMIFS(Transactions!$F:$F,Transactions!$C:$C,"Income",Transactions!$D:$D,A5,Transactions!$G:$G,$B$2,Transactions!$H:$H,BudgetYear)`
D	Difference	`=C5-B5`
E	% of Plan	`=IF(B5=0,0,C5/B5)`

Totals row 12: `B12 =SUM(B5:B11)`, `C12 =SUM(C5:C11)`, `D12 =C12-B12`.

Expense block (rows 16 to 42):

Col	Header	Formula (row 16 example)
A	Category	`=Settings!F2`
B	Budgeted	Input (yellow)
C	Spent	`=SUMIFS(Transactions!$F:$F,Transactions!$C:$C,"Expense",Transactions!$D:$D,A16,Transactions!$G:$G,$B$2,Transactions!$H:$H,BudgetYear)`
D	Remaining	`=B16-C16`
E	% Used	`=IF(B16=0,0,C16/B16)`
F	Progress Bar	`=SPARKLINE(E16, {"charttype","bar";"max",1;"color1",IF(E16>1,"#D9534F",IF(E16>0.85,"#F0AD4E","#5CB85C"))})`

Totals row 43: `B43 =SUM(B16:B42)`, `C43 =SUM(C16:C42)`, `D43 =B43-C43`.

Left to budget (zero-based budgeting check), cell B45:

```
=B12-B43
```

Show green when it equals 0, otherwise red (see conditional formatting).

Conditional formatting (Format > Conditional formatting):

- D16:D42: if less than 0, red fill `#F8D7DA`, dark red text (overspent).
- E16:E42: green below 0.85, amber 0.85 to 1, red above 1.
- B45: custom formula `=$B$45=0` green; `=$B$45<>0` light red.

Tab 4: Dashboard (Summary)

Selector in B2: month dropdown (same list), with `C2 =MATCH(B2,Settings!J2:J13,0)`. Add an option **"Full Year"** if you want annual view by appending it to the list and using the year-only formulas noted below.

KPI cards (large merged cells, big font):

KPI	Formula
Total Income	`=SUMIFS(Transactions!F:F,Transactions!C:C,"Income",Transactions!G:G,$C$2,Transactions!H:H,BudgetYear)`
Total Expenses	`=SUMIFS(Transactions!F:F,Transactions!C:C,"Expense",Transactions!G:G,$C$2,Transactions!H:H,BudgetYear)`
Net Savings	`=Income cell - Expenses cell`
Savings Rate	`=IF(Income=0,0,NetSavings/Income)` formatted as %
Net Worth	`='Net Worth'!B20`
Total Debt	`='Debt Payoff'!C14`
Emergency Fund Progress	`='Savings Goals'!F4`

Year-to-date versions: remove the month criterion, e.g. `=SUMIFS(Transactions!F:F,Transactions!C:C,"Income",Transactions!H:H,BudgetYear)`.

Top 5 spending categories (a nice wow factor), A12 downward:

```
=QUERY(Budget!A16:C42,"select A, C where C > 0 order by C desc limit 5 label A 'Category', C 'Spent'",0)
```

Charts to insert (Insert > Chart):

1. **Income vs. Expenses by month:** helper table on a hidden range with months Jan to Dec, each `=SUMIFS(Transactions!F:F,Transactions!C:C,"Income",Transactions!G:G,ROW()-ROW($A$30)...)`. Simpler: type month numbers 1 to 12 in column A and use `=SUMIFS(Transactions!$F:$F,Transactions!$C:$C,"Income",Transactions!$G:$G,A31,Transactions!$H:$H,BudgetYear)` for income and the same with "Expense" for expenses. Make a clustered column chart.
2. **Spending by category:** donut chart from the Top 5 or full Budget!A16:C42.
3. **Net savings trend:** line chart of income minus expenses by month.

Budget health message (cell C10):

```
=IF(Budget!B45<>0,"Give every dollar a job: "&TEXT(Budget!B45,"$#,##0.00")&" left to budget",IF(SavingsRate>=0.2,"Great month! You're saving 20%+","On track. Keep going!"))
```

Tab 5: Debt Payoff Tracker (Snowball and Avalanche)

Inputs (yellow):

- B2: **Extra monthly payment** (above all minimums), e.g. $200
- B3: **Method** dropdown: `Snowball`, `Avalanche`

Debt list, rows 6 to 13 (up to 8 debts):

Col	Header	Notes
A	Debt Name	Dropdown or free text: Chase Visa, Discover, Federal Student Loan, Car Loan, Medical Bill
B	Type	Credit Card, Student Loan, Auto, Personal, Medical
C	Current Balance	Input
D	APR %	Input, e.g. 22.99%
E	Minimum Payment	Input
F	Priority Rank	Formula
G	Monthly Interest	`=IF(C6="","",ROUND(C6*D6/12,2))`
H	Est. Months to Payoff (minimum only)	`=IF(OR(C6="",E6<=G6),"",ROUNDUP(NPER(D6/12,-E6,C6),0))`

Totals row 14: `C14 =SUM(C6:C13)`, `E14 =SUM(E6:E13)`, `G14 =SUM(G6:G13)`.

Priority Rank (F6): the one formula that powers both methods.

```
=IF(C6="","",IF($B$3="Snowball",RANK(C6,$C$6:$C$13,1),RANK(D6,$D$6:$D$13,0)))
```

Snowball ranks by smallest balance first. Avalanche ranks by highest APR first. Rank 1 gets all the extra money.

Extra payment allocated (I6):

```
=IF(F6=1,$B$2,0)
```

Total payment this month (J6): `=IF(C6="","",E6+I6)`

Payoff schedule (month by month) in a separate block, rows 20 and down:

Columns: Month (A), then for each of the 8 debts a Balance column (B to I), then Total Balance (J), Total Interest Paid (K).

Use a rolling-payment approach: the extra amount each month is `$B$2` plus the minimums of debts already paid off (the "snowball" effect). Implementation in row 21 for debt in column B (debt 1):

```
=IF(B20<=0,0,MAX(0,B20+ROUND(B20*$D$6/12,2)-
($E$6+IF(Rank1Target=1,AvailableExtra,0))))
```

Because this schedule is the most error-prone piece, build it with these helper definitions on rows 17 and 18:

- **Row 17, Available extra this month (cell B17):** `=$B$2+SUMPRODUCT((B20:I20<=0)*($E$6:$E$13))` (extra money plus freed-up minimums, with the debt balances arranged horizontally in B20:I20 and the minimum payments transposed the same way).
- **Target debt this month:** the lowest-ranked debt whose balance is still above 0, found with `=MINIFS($F$6:$F$13,TRANSPOSE(B20:I20),">0")` inside an ARRAYFORMULA.

Payoff summary outputs:

- **Debt-free date:** `=EDATE(TODAY(),MAX(months to zero))`, where months to zero is `=COUNTIF(J20:J200,">0")`.
- **Total interest saved vs. minimums only:** interest total (minimums only) minus interest total (selected method).
- **Progress bar:** `=SPARKLINE(1-C14/StartingTotal, {"charttype","bar";"max",1;"color1","#5CB85C"})`, where `StartingTotal` is a typed-in cell (e.g. B4) holding the original total debt.

Selling-point tip: add a **"Method Comparison"** box showing debt-free date and total interest for Snowball and Avalanche side by side. Buyers love seeing the difference. Build it by duplicating the schedule block once per method.

Quality note: a month-by-month schedule with rolling payments is the hardest part of this template. Test it with 3 sample debts and compare against a trusted online calculator before you sell it.

Tab 6: Savings Goals & Emergency Fund

Emergency fund block (top):

Cell	Label	Formula
B2	Monthly essential expenses	`=SUM(Budget!C16:C22)+...` or a typed estimate (Rent, Utilities, Groceries, Insurance, Minimum debt payments)
B3	Months of coverage goal	Dropdown: 3, 4, 6, 9, 12
B4	Emergency fund target	`=B2*B3`
B5	Currently saved	Input, or link to a sinking-fund balance
F4	% complete	`=IF(B4=0,0,B5/B4)`
B6	Months covered today	`=IF(B2=0,0,B5/B2)`

Progress bar (C5): `=SPARKLINE(F4, {"charttype","bar";"max",1;"color1","#2E86C1"})`

Goal list (rows 10 to 19):

Col	Header	Formula
A	Goal	Input: Emergency Fund, Vacation, New Car, Down Payment, Wedding, Roth IRA
B	Target Amount	Input
C	Saved So Far	Input
D	Target Date	Input
E	Remaining	`=IF(B10="","",B10-C10)`
F	% Complete	`=IF(B10="","",C10/B10)`

Col	Header	Formula
G	Months Left	`=IF(D10="","",MAX(1,DATEDIF(TODAY(),D10,"M")))`
H	Needed Per Month	`=IF(OR(B10="",D10=""),"",MAX(0,E10)/G10)`
I	Progress	`=SPARKLINE(F10,{"charttype","bar";"max",1;"color1","#5CB85C"})`
J	Status	`=IF(F10>=1,"Goal reached!",IF(H10>Budget!$D$12,"Behind","On track"))`

Add conditional formatting to F10:F19: green at 100%, blue from 50% to 99%, gray below 50%.

Tab 7: Net Worth

Assets (rows 3 to 10): Checking, Savings, Brokerage/Investments, Retirement (401k/IRA), Home Value, Car Value, Crypto, Other. Column B = current value (input).

Liabilities (rows 12 to 18): Credit Cards (`='Debt Payoff'` sum by type with `=SUMIF('Debt Payoff'!B6:B13,"Credit Card",'Debt Payoff'!C6:C13)`), Student Loans, Auto Loan, Mortgage, Other.

Totals:

- B11: `=SUM(B3:B10)` (Total Assets)
- B19: `=SUM(B13:B18)` (Total Liabilities)
- **B20:** **`=B11-B19`** (Net Worth)

Optional monthly history table (Month, Net Worth) with a line chart so buyers see progress over time.

Tab 8: Start Here

Short welcome message, a 5-step setup checklist, color legend (yellow = type here, white = auto), a link to the buyer guide, and a "Need help? Contact [your email]" line. Add a hyperlinked table of contents using `=HYPERLINK("#gid=SHEETID","Go to Dashboard")`.

Freelancer extras (a strong differentiator)

Add these as bonus sections inside Budget and Dashboard:

- **Tax set-aside tracker:** a rate cell (default 25%) and `=Income_Freelance*Rate` showing what to set aside per month for quarterly estimated taxes (IRS due dates: April 15, June 15, September 15, January 15). Note: educational estimate only, not tax advice.
- **Irregular income buffer:** average of the last 3 to 6 months of income, shown next to this month's income.
- **Business vs. personal tag:** one extra Transactions column (I) with a Business/Personal dropdown.

Final QA checklist before listing

- Enter 30 sample transactions and confirm every tab updates.
- Test on the Google Sheets mobile app and in a desktop browser.
- Make a copy using the "Make a copy" link in an incognito window, exactly like a buyer would.
- Protect formula ranges; leave input cells editable.
- Remove sample data before delivery, or ship two versions: **Blank** and **Demo**.
- Check that SPARKLINE, QUERY and ARRAYFORMULA work after copying.

Part 2 – Buyer Guide (PDF Content)

Title page: The Ultimate US Personal Finance & Budget Dashboard: Quick-Start Guide

Welcome

Thank you for your purchase! This dashboard helps you track income, control spending, crush debt and build savings, all in a Google Sheet that works on your phone and computer. No software to install and no monthly fees.

You need: a free Google account and about 20 minutes to set up.

Step 1: Make your own copy (important!)

1. Open the **Google Sheets link** in the PDF (or the link in your download page).
2. You will see a **"Make a copy"** prompt. If not, click **File > Make a copy**.
3. Name your file, choose a folder in Google Drive, and click **Make a copy**.
4. Close the original and work only in **your** copy. The original is view-only, so changes there won't save.

Tip: Using a phone? Install the free Google Sheets app from the App Store or Google Play, then open your copy from Google Drive.

Step 2: Understand the colors

- **Yellow cells:** type here.
- **White cells:** formulas, calculated for you. Please don't type over them.
- **Green / amber / red:** status colors (on track, close to limit, over budget).

Step 3: Set up your categories (Settings tab)

1. Open the **Settings** tab.
2. Rename any category to match your life (for example, change "Gym" to "Pilates").
3. To add a category, type it into the next empty cell in the list.
4. Replace the account names with your own (Checking, Chase Visa, Cash App, etc.).
5. Set your budget year.

Note: If you rename a category after you've logged transactions, update those transactions too so totals still match.

Step 4: Build your monthly budget (Budget tab)

1. Choose the month at the top.
2. Type your **expected income** for each source.
3. Type your **budgeted amount** for each expense category: rent, groceries, gas, student loans, subscriptions and so on.
4. Look at **Left to Budget** at the bottom. Aim for **$0.00**. That means every dollar has a job.
5. Throughout the month, the **Spent** column and the progress bars update on their own.

Step 5: Log your transactions (Transactions tab)

This is your daily habit, and it takes about 2 minutes.

1. Enter the date and a short description.
2. Choose **Income** or **Expense**.
3. Pick a category and account from the dropdowns.
4. Enter the amount as a **positive number** (for example, 45.20).

Best practice: log transactions every few days, or set a weekly 10-minute "money date" with yourself.

Step 6: Check your Dashboard

The Dashboard updates automatically. Pick any month to see total income, total expenses, net savings, savings rate, net worth, debt balance and emergency fund progress, plus charts of where your money goes.

Step 7: Pay off debt (Debt Payoff tab)

1. List each debt: name, balance, APR, and minimum payment.
2. Enter how much **extra** you can pay each month.
3. Choose your method:
   - **Debt Snowball:** pays the smallest balance first. Great for motivation and quick wins.
   - **Debt Avalanche:** pays the highest interest rate first. Usually saves the most money.
4. Pay the minimum on every debt, and send all extra money to the **#1 priority** debt.
5. When a debt is paid off, its payment rolls into the next one.
6. Update balances each month and watch your debt-free date move closer.

Step 8: Build savings (Savings Goals tab)

1. Enter your essential monthly expenses and choose how many months of coverage you want in your emergency fund. Many people aim for 3 to 6 months.
2. Add goals such as vacation, a car, or a down payment, each with a target amount and date.
3. The sheet tells you how much to save **each month** to hit each goal.
4. Update "Saved so far" whenever you add money.

Step 9: Track your net worth (Net Worth tab)

Once a month, update the values of your assets and liabilities. Your net worth is calculated automatically. It's the best long-term measure of progress.

Your simple daily and monthly routine

- **Daily/every few days (2 to 5 minutes):** log transactions.
- **Weekly (10 minutes):** review Budget progress bars, adjust if needed.
- **Monthly (20 minutes):** set next month's budget, update debts and net worth, review the Dashboard.

Troubleshooting

Problem	Fix
I can't edit the sheet	You're in the original. Use File > Make a copy.
Numbers show as dates or text	Select the cell, then Format > Number > Currency.
A formula shows an error	Check that dates and amounts are entered correctly, with no extra text in amount cells.

Problem	Fix
Dropdown is missing	Copy a cell above it and paste with Ctrl+Shift+V (Cmd+Shift+V on Mac).
Charts look empty	Make sure transactions are in the selected month and year.

Terms and disclaimer

This is an educational budgeting tool, not financial, tax, or legal advice. For personalized advice, consult a licensed professional. Personal use only: please do not resell or redistribute. Need help? Message the seller through the store where you purchased.

Part 3 – Marketing Copy (Etsy / Gumroad / Ko-fi)

Product title options

Primary (Etsy, ~140 characters):

> Budget Spreadsheet Google Sheets | Personal Finance Dashboard | Debt Payoff Tracker, Savings Planner, Monthly Budget Template USD

Alternatives:

- Google Sheets Budget Template | Paycheck Budget Planner, Debt Snowball & Avalanche, Emergency Fund Tracker
- Ultimate Personal Finance Dashboard | Budget Planner + Debt Payoff + Net Worth Tracker | Google Sheets

Gumroad / Ko-fi title: The Ultimate US Personal Finance & Budget Dashboard (Google Sheets)

Product description

Tired of wondering where your paycheck went?

If you're living paycheck to paycheck, watching credit card balances climb, or saving nothing because there's "never anything left," you're not alone, and it's not because you're bad with money. You just don't have a clear system.

The Ultimate US Personal Finance & Budget Dashboard gives you that system in one clean Google Sheet. It's built for American life: rent or mortgage, utilities, student loans, credit cards, gas, groceries, Netflix and Spotify, and everything in between.

Type in your numbers. The dashboard does the math.

See your income, spending, net savings, debt and net worth at a glance, with color-coded progress bars that tell you when you're on track and when you're close to overspending.

What's inside:

- **Dashboard:** your monthly snapshot of income, expenses, net savings, savings rate, net worth, and debt, with clear charts.
- **Monthly Budget Planner:** plan income versus expenses by category, with progress bars and a zero-based "Left to Budget" check.
- **Transaction Log:** quick dropdown entry, with everything feeding the dashboard automatically.
- **Debt Payoff Tracker:** switch between **Debt Snowball** and **Debt Avalanche**, see your payoff priority, and watch your debt-free date.
- **Savings & Emergency Fund Tracker:** set a 3 to 12 month cushion, plan goals like vacation, a car, or a down payment, and see exactly what to save each month.
- **Net Worth Tracker:** track assets and liabilities and see your progress over time.
- **Freelancer bonus:** a tax set-aside helper and irregular income view, made for 1099 and gig workers.

Who it's for: recent grads, young professionals, freelancers, couples, families, and anyone ready to take control of their money, whether you earn $2,000 or $12,000 a month.

How it works:

1. Purchase and download the PDF with your Google Sheets link.
2. Click "Make a copy" to save it to your own Google Drive.
3. Start tracking, and watch your money finally make sense.

Important to know: this is a digital Google Sheets template. No physical item will be shipped. You need a free Google account. It does not connect to your bank accounts. You enter your own numbers, so your data stays private in your own Drive. This is an educational tool and not financial advice.

Because your money deserves a plan. Add to cart and start today!

5 high-converting bullet points

- **Beginner friendly, set up in 20 minutes:** a simple Start Here tab and a step-by-step guide mean you don't need any spreadsheet skills.
- **No monthly fees, ever:** pay once, use it for years. No app subscriptions and no bank logins.

- **Works on mobile and PC:** use it on your phone with the free Google Sheets app, or on a laptop, tablet, or Chromebook.
- **Crush debt your way:** choose Debt Snowball for quick wins or Debt Avalanche to save on interest, with a clear payoff plan.
- **Fully automated and built for US life:** USD formatting, American expense categories, and auto-calculating dashboards with progress bars, so you always know where you stand.

Suggested pricing (USD)

Strategy	Price	Notes
Launch price (first 2 to 4 weeks)	**$9.99 to $12.99**	Builds sales volume and reviews quickly
Standard price	**$16.99 to $19.99**	Sweet spot for a full dashboard with debt payoff and net worth
Bundle (Dashboard + extras)	**$24.99 to $29.99**	Add a printable budget binder, bill tracker, or a sinking-funds tab
Etsy note	Use a "was $29.99" sale display	Etsy shows a strikethrough price during sales and drives clicks

On Gumroad and Ko-fi you can use **"pay what you want" with a minimum** (for example, $12 minimum), plus a discount code like `WELCOME20` to reward email subscribers.

SEO tags and keywords

Etsy tags (13 max, 20 characters each):

1. budget spreadsheet
2. google sheets budget
3. debt payoff tracker
4. budget template
5. finance dashboard
6. monthly budget
7. debt snowball
8. savings tracker
9. paycheck budget
10. net worth tracker
11. emergency fund

12. freelancer finance
13. budget planner

Gumroad / Ko-fi tags and search phrases:

- google sheets budget template
- personal finance spreadsheet
- debt snowball spreadsheet
- debt avalanche calculator
- paycheck to paycheck budget
- student loan payoff tracker
- zero based budget template
- freelancer budget template
- expense tracker spreadsheet
- financial planner digital
- credit card payoff planner
- budget for beginners

Etsy listing tips:

- Put your strongest keywords in the **first 40 characters** of the title.
- Add **10 listing images**: a main mockup (laptop plus phone), a feature collage, a debt payoff close-up, a before/after, "what's included", "how it works in 3 steps", a freelancer angle, a mobile view, and a FAQ image.
- Make a **short screen-recording video** of the dashboard updating as you add a transaction. Videos lift conversions.
- Answer buyer questions fast and ask for reviews through the order message.
- Include a clear **"digital product, no refunds"** policy statement per Etsy's digital-goods rules.

Short listing teaser (for social posts and Pinterest)

> Stop wondering where your money went. This Google Sheets dashboard tracks your budget, crushes debt with Snowball or Avalanche, and builds your emergency fund. No subscriptions, works on your phone. Instant download.

Quick FAQ for the sales page

Does it work on iPhone and Android? Yes, with the free Google Sheets app.

Does it work in Excel? It's designed for Google Sheets. Some features, like SPARKLINE progress bars, won't work the same in Excel.

Does it link to my bank? No. You enter transactions yourself, which keeps your data private.

Can I change categories? Yes, everything is editable in the Settings tab.

Can I use it for more than one year? Yes. Change the budget year in Settings, or make a fresh copy each January.

Is this financial advice? No. It's an educational budgeting tool.

Launch checklist

1. Build and test the sheet with sample data on desktop and mobile.
2. Export the buyer guide as a PDF (File > Download > PDF) with the "Make a copy" link on page 1.
3. Create a view-only link: Share > Anyone with the link > **Viewer**, then replace the end of the URL (`/edit...`) with `/copy`, so buyers are prompted to make their own copy.
4. Design listing images in Canva.
5. Upload the PDF as the digital download, add the title, description, bullets, tags, and price.
6. Test the purchase flow yourself using a discount code or a free test order.
7. Ask early buyers for honest reviews and iterate on their feedback.
